Long-Lasting Comfort. Best-in-Class Support. All-Makes, Idle-Free. **Red Dot Delivers.**

Comfort comes in many forms. It's the money you save because you're not burning fuel to cool the cab. It's the satisfaction of complying with anti-idling laws. It's a simple, all-makes installation that doesn't take up a lot of valuable interior space. It's a rugged, energy-efficient design that minimizes voltage draw. It's up to 6,150 btu/hr of cooling when you need it. It's the clean, quiet operation of an all-electric air conditioner.

And it's knowing that your battery-powered auxiliary A/C system is backed by Red Dot's world-class distribution and customer support network.

Talk to your Red Dot distributor about the Sleeping Well Arctic 2000 and OBLO battery-powered mobile A/C systems from Indel B. And take comfort in the most economical, efficient auxiliary A/C products available.

Ten Reasons to choose No-Idle Systems by **Indel B**

- 1 Idle-free cooling.**
No more having to keep the truck running during nighttime stops as with traditional air conditioners. Sleeping Well systems maintain a cool, comfortable cab and sleeper environment while the truck engine is turned off, burning no fuel and producing no emissions.
- 2 Driver comfort for 10 hours or more.**
The Arctic 2000 provides up to 6,150 btu/hr of cooling and can maintain a comfortable temperature inside the vehicle for 10 hours or more in typical use. It's quiet and emits no exhaust, making it easier for the driver to rest.
- 3 Minimal maintenance.**
APUs, gensets, and other fuel-fired A/C units require constant care to keep them running. Sleeping Well systems require no regular maintenance.
- 4 Two models.**
Choose from the wall-mounted high-capacity Sleeping Well Arctic 2000 for sleeper-equipped tractors or the roof-mounted Sleeping Well OBLO for straight trucks and other applications.
- 5 Rugged components.**
Sleeping Well systems are built for trucking, with Danfoss compressors and corrosion-resistant stainless-steel for the condenser housing and brackets.
- 6 All-makes installation.**
Sleeping Well systems come as a complete kit designed to fit almost any commercial vehicle.
- 7 Isolated batteries.**
The system is powered by dedicated deep-cycle batteries that are isolated from the trucks main batteries to ensure that the truck will always start.
- 8 Indel B quality.**
Over 40 years of experience makes Indel B the world leader in 12/24-volt cooling and refrigeration products for commercial vehicles and other applications.
- 9 CARB-compliant.**
Sleeping Well auxiliary A/C systems are CARB compliant, so it's good for use and sale in all states, including California.
- 10 Product support.**
Red Dot's 175 dealers in North America and Seattle-based customer support group mean you'll get the help you need.
